Wakol Parquet Adhesives provide safety

Thanks to a strong product range!

Diverse

The Wakol parquet adhesive range is very broad, with a choice of silane-based MS adhesives, dispersion adhesives and polyurethane adhesives. Depending on the situation and requirements, an optimum solution can be found for the individual installation situation. The portfolio offers the possibility of using 1- and 2-component shear-resistant, firm-elastic or elastic adhesives.

Ergonomic

In addition to classic processing from the bucket, a complete product line of tubular bag adhesives is available. These are used in the increasingly popular standing application with the aid of battery-powered applicators such as the WAKOL Applicator 90.

Safe

Regardless of the Wakol parquet adhesive selected, all products are subjected to extensive quality and system tests. You can always rely on the advertised approvals.

It goes without saying that the adhesives fulfil the applicable standards and important approvals. They are also used in ship-building, modular construction and sports flooring.

Another special feature is the cross-company Connected Systems warranty with the surface specialist Loba. Interactions between surface treatment and adhesive are therefore ruled out*.

Future-oriented

The packaging is selected so that fresh material is always available during the storage period of up to 18 months and the adhesive can be fully utilised. All moisture-curing products are filled in sealed containers or suitably sealed tubular bags.

In order to conserve resources in the packaging as well, at least 50% of the containers are made from recycled material. These can also be recycled when empty.

Sustainable

Sustainability issues are rightly playing an increasingly important role in the selection of parquet adhesives. Emission-controlled products are the focus in order to keep indoor air quality high. Depending on requirements, the parquet adhesive range includes products tested and certified according to a wide variety of global labels, such as EMICODE or Blue Angel. Details on the classifications and categorisations can be found in the sustainability datasheet for the respective product at wakol.com.

Please always observe the technical information before processing.

* We recommend the Loba care products for maintaining the parquet surface.
