WAKOL MS 239 Parquet Adhesive, elastic – first choice for sustainable construction

Low-emission construction

Ecological aspects are becoming increasingly important globally in the area of new construction and renovations. To this end, different requirements and a variety of criteria for construction in accordance with healthy living standards are defined.

With WAKOL MS 239 Parquet Adhesive, elastic, a product is available that enables you to meet the greatest challenges concerning low-emission products in accordance with healthy living standards. Apart from the EMICODE EC1 PLUS, the product also satisfies the criteria of Blue Angel, Sentinel Haus, Baubook and Nordic Swan Ecolabel.

No compromises in processing

With WAKOL MS 239 Parquet Adhesive, elastic, you can lay floor coverings with the usual good spreadability and distinct ridge formation. It does not matter whether the subfloor is absorbent or not.

Safe to use

WAKOL MS 239 Parquet Adhesive, elastic with a special trowel can be applied in a single operation to keep any residual moisture in the screed away from the parquet and to lay the parquet – an adhesive and moisture barrier in one.

In addition, there is a Connected Systems warranty together with many Loba laquers.*

Protect the subfloor

WAKOL MS 239 Parquet Adhesive, elastic is ideally suited for reliably bonding parquet flooring such as multi-layer parquet and a variety of solid parquets. The elastic adhesive ridges reduce the forces acting on the parquet during periods of changes in humidity and protect the subfloor.

If additional relief of the subfloor is required, WAKOL MS 239 Parquet Adhesive, elastic can be used in the system configuration with Wakol footfall soundproofing mats and decoupling sheets.

Protect resources

With the recyclable packaging, waste is reduced and fed back into the raw-material cycle. In addition, the container used for the WAKOL MS 239 Parquet Adhesive, elastic, is now made from 50% recycled plastic.

A foil, firmly sealed to the edge of the container, ensures optimum protection against moisture and safeguards storage stability for 18 months. The adhesive in the container does not dry up, meaning the entire adhesive can be used.

Please always observe the technical information before processing.

* We recommend the Loba care products for maintaining the parquet surface.
